Thanks Dave J.

Dave B, can you provide me a list of potential experts? We aren't committing anyone at this time just trying to get a list together. Thanks

Kelly,

Dave Burden (Director of the EPA's Ground Water Technical Support Center managed here at the NRMRL/GWERD) will provide you with the names of technical experts to help develop long-term ground water monitoring plans, if needed, related to the Gold King Mine release incident in Colorado and move this effort forward.

FYI - over the past weekend, several of GWERD's scientific staff volunteered to provide assistance if needed. Although it turns out we were not contacted, those volunteering to provide assistance this past weekend were Steve Acree (hydrogeology), Rick Wilkin (geochemistry), and Jim Weaver (subsurface modeling). Dave's list may differ depending on the availability of these experts.

- dgj -

Subject: Action: List of experts to help develop long-term monitoring plan for Gold King Mine

Importance: High

Hello All,

We just got a request to develop a list of individuals who could help support in the development of a Long Term monitoring plan for the Gold King Mine Spill.

They are looking for expertise in monitoring of surface water, groundwater, drinking water and sediments, and mining.

Please send me names and area of expertise by 2: 30 EST today.

The expectation is that this will be developed over the next month or two and will not require full time support.

Dave, I know you have already been asked to pull together this information for GWERD so please send that as well.

Alice, Barb Butler's name has come up for her mining expertise. Kirk Scheckel also came up for metal contamination in sediments.

Thanks,

Kelly
